EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Nathan Feld on 3/8/2011.

The application has been amended as follows:

Cancel claims 18-19 and 22-23.

Claim 20:

Line 1. Change "The method of claim 18 wherein:" to – The method of claim 12 wherein: -- .

Claim 21:

Line 1. Change "The method of claim 18 wherein:" to – The method of claim 10 wherein: --.

Claim 24:

A shared interactive environment, comprising:

a camera system to provide a first live view of a location and a second live view of the location, wherein the second live view can be configured to zoom in on a portion of the first live view, and wherein each live view shows a different view of a plurality of physical devices at the location;

a first graphical user interface (GUI) coupled to the camera system which presents the first live view and the second live view, wherein each view shows one or more of the plurality of physical devices at the location, wherein information is associated with at least one physical device in the first live view;

a device controller to dynamically control the physical device in response to interaction of a first user with the GUI;

wherein the interaction can include annotating at least one of: 1) the first live view of the location; and 2) the second live view of the location;

wherein annotations are automatically transferred to the physical device in the live views if the annotation is at least partially drawn over the physical device as it appears in the live video image, and wherein the annotation is displayed on the physical device such that the annotation can be viewed at the location;

wherein interaction can include causing the information to be transferred from the at least one physical device to a second physical device in the second live view, wherein the transfer is brought about by manipulating a visual representation of the information by interacting with the first live view and the second live view;

a device tracker coupled to the camera system and to dynamically recognize new physical devices; and

wherein the camera system can be mounted on a mobile, robotic platform.

Allowable Subject Matter

2. Claims 1-13, 15-17, 20-21, 24-32, 34-35, and 37-46 are allowed.

3. The following is an examiner's statement of reasons for allowance:

Regarding independent claim 1, the prior art fails to teach or reasonably suggest a method for exchanging information in a shared interactive environment, comprising:

selecting a first remote physical device in a first live video image, that shows a

first view of the shared interactive environment, wherein information is

associated with the first remote physical device;

causing the information to be transferred to a second remote physical device

shown in a second live video image that shows a second view of the shared

interactive environment, wherein the transfer is brought about by manipulating a

visual representation of the information shown in the first live image by

interacting with the first live video image and the second live video image.

Regarding independent claim 10, the prior art fails to teach or reasonably suggest a method for exchanging information in a shared interactive environment, comprising:

selecting a first object wherein the first object is one of 1) a first physical device

at a remote location shown in a live video image, and 2) an icon on a computing

device, wherein the live video image shows a view of the remote location which

Art Unit: 2423

**includes a plurality of physical devices including the first physical device;
causing information associated with the first object to be transferred to a second object wherein the second object is the other of 1) the first physical device at the remote location shown in the first live video image, and 2) the icon on the computing device;
wherein the transfer is brought about by manipulating a visual representation of the information in the live video image;
wherein manipulating includes interacting with the first object in the live video image and the second object.**

Regarding independent claim 24, the prior art fails to teach or reasonably suggest a shared interactive environment, comprising:

a camera system to provide a first live view of a location and a second live view of the location, wherein the second live view can be configured to zoom in on a portion of the first live view, and wherein each live view shows a different view of a plurality of physical devices at the location;

a first graphical user interface (GUI) coupled to the camera system which presents the first live view and the second live view, each view shows one or more of the plurality of devices at the location, wherein information is associated with at least one physical device in the first live view;

a device controller to dynamically control the physical device in response to interaction of a first user with the GUI wherein the interaction can include annotating at least one of: 1) the first live view of the location; and 2) the second live view of the location;

Art Unit: 2423

wherein interaction can include causing the information to be transferred from the at least one physical device to a second physical device in the second live view, wherein the transfer is brought about by manipulating a visual representation of the information by interacting with the first live view and the second live view.

Regarding independent claim 37, the prior art fails to teach or reasonably suggest a non-transitory computer readable memory having instructions stored thereon that when executed by a processor cause a system to:

select a first remote physical device in a first live video image, that shows a first view of the shared interactive environment, wherein information is associated with the first remote physical device; and
cause the information to be transferred to a second remote physical device shown in a second live video image that shows a second view of the shared interactive environment, wherein the transfer is brought about by manipulating a visual representation of the information by interacting with the first live video image and the second live video image.

Regarding independent claim 46, the prior art fails to teach or reasonably suggest a system comprising:

means for selecting a first remote physical device in a first live video image that shows a first view of the shared interactive environment, wherein information is associated with the first remote physical device; and
means for causing the information to be transferred to a second remote physical

Art Unit: 2423

device shown in a second live video image that shows a second view of the shared interactive environment, wherein the transfer is brought about by manipulating a visual representation of the information by interacting with the first live video image and the second live video image.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
